SUMMARY

Senior Software Engineer with **6+ years** of experience building scalable web applications for **FinTech, banking** and Enterprise Automation companies. Specialize in React.js, Next.js, TypeScript, with growing experience in **Node JS** microservices on the backend. Track records include 35% reduction in page load times and establishing rigorous CI/CD and testing workflows (Jest /Cypress). Adept at leading frontend architecture decisions, mentoring junior developers, and integrating **AI-assisted development tools** (Claude Code, GitHub Copilot, Cursor) into daily engineering workflows.

TECHNICAL SKILLS

Front-End: React 18+, Next.js (SSR/SSG), TypeScript, Redux, Redux Toolkit, Zustand, TanStack, SCSS, Storybook, React Native, Styled Components, Material-UI, Tailwind CSS, WebSockets, Micro-Frontend architecture, Progressive Web Apps (PWA), Multi-Language Support (i18n), Responsive Design.

AI Development / AI- Augmented: Agentic Workflows, Vibe Coding Practices, Claude Code, GitHub Copilot, Cursor AI, Prompt-driven development, Building AI agents, Creating Custom Skills, Prompt Engineering.

UI Optimization: SSR, SSG, Lazy Loading, Code Splitting, Memoization, Lighthouse, React Profiler, WCAG Accessibility, ARIA.

Languages: JavaScript (ES6+), TypeScript, HTML, HTML5, CSS3, jQuery.

Testing & QA: Cypress, Jest, React Testing Library (RTL), Playwright, TDD, cross-browser testing, unit & integration tests, E2ETesting.

Back-End: Node.js, Express JS, REST APIs, Axios, GraphQL, JWT Authentication, Authorization, CORS, Postman, Swagger, AWS(S3), Docker, CI/CD Pipeline.

Databases: MongoDB, MySQL, NoSQL.

Development Tools: Git, GitHub, Jenkins, Webpack, Babel, Postman, NPM, Vite.

Tools & Methodologies: Agile/ Scrum/ Kanban workflows, Jira, Confluence, Figma, Zeplin, Data Structures & Algorithms, Mentorship / Leadership.

PROFESSIONAL EXPERIENCE

Lisec Automation, Dubai, UAE (Senior Software Engineer)

MAY 2023 - Present

- Built a company-wide UI library using React JS and Storybook, improving UI consistency across projects by 60% and increasing team development speed by 40%.
- Improved page load times by 35% and Core Web Vitals scores by implementing lazy loading and server-side rendering (SSR).
- Automated front-end testing using Cypress, Jest, and React Testing Library, saving 10+ hours of manual testing per week.
- Participated in weekly code reviews and pair programming with senior developers, accelerating adoption of React best practices across the team.
- Implemented WebSockets to enable real-time data updates and user notifications within the application.
- Designed and built a custom internal AI coding agent and skills, that gives LLMs architecture-aware context on the company's codebase — feature locations, structure, and conventions — helping the AI generate accurate, pattern-consistent code and reducing generated solutions to a more optimal, minimal footprint, significantly reducing duplicate code.
- Implemented multi-language support (i18n) across the application for 6 [German, Polish, etc] languages, enabling localized interfaces for international users and reducing the effort to add a new language from days to hours.

Shipped Projects:

- **Glass Rack Editor:** Devised from scratch an application for efficient 2D/3D visualization of rack, create a whole new Table component at Application level, Drag-and-drop feature for moving panes from different rack to rack and strategic placement of glasses on shipping racks.
- **Capacity-overview:** Implemented and tested a system that monitors order utilization across different machines, allowing for the prioritization, arrangement, and movement of orders to optimize machine usage.
- **UI-Components (UI-Library):** created reusable components like **Tooltip, Accordion Table, Dropdown, Toggle Buttons, Input Dropdown, Weekly Calendar, etc.** for internal projects to accelerate development.
- **Production-Planning-Dashboard:** Developed an ERP-styled Dashboard for incorporating a variety of **charts** such as **Gantt, Heatmap, and Pie** using the Fusion Chart library comprehensive visual data representation, improve decision-making processes.

Capgemini Technologies Service India Pvt Ltd, Hyderabad, IND (Senior Software Engineer)

MAR 2022 – MAY 2023

- Built responsive websites / web Apps for over 2M+ users using React.js, JavaScript, and CSS compiled using babel and webpack build tools.
- Mentored 2 junior developers providing guidance on effective front-end development strategies which resulted in a 30% productivity increase within the team.
- Facilitated a cross-functional team in adopting TypeScript for front-end development, reducing runtime errors observed in production by 30%.
- Implemented a micro-frontend architecture, facilitating smoother feature rollouts and isolating failures, reducing cross-feature bugs by **10%**.
- Converted the application into a Progressive Web App (PWA) with service workers and offline caching, enabling installable access and reliable use on shop-floor devices with unstable connectivity.

Projects:

- **HSBC Bank:** Served as a Front-End Developer for a large-scale banking web application enabling customers to manage their banking needs digitally. Handled UI development, integration with backend services, and ensured accessibility, responsiveness, and security compliance while collaborating with global teams.
- **USAA Financial Services:** Implemented innovative insurance solution to enhance vehicle policy management efficiency by reducing processing time and collaborating with the BA team.
- **Sanctions as a Service:** Build a secure platform for document screening and compliance, handled development, and testing.

CodeKindle Solutions Pvt Ltd, Hyderabad, IND (Software Engineer)

OCT 2020 – MAR 2022

- Engineered high-performance web apps (**Howzdat, DiFu**) used trending technologies, identified areas to enhance performance leading to zero downtime.
- Optimized real-time data processing, improved page load time by 27% and increasing in daily active users.

Projects:

- **Difu (Digital Readiness):** Developed and maintained an application to assess employee readiness within organization, overseeing the entire development and testing process.
- **Howzdat (Gamified Testing App):** Built a gamified web-based test system to enhance high-school teacher-student engagement, focusing on intuitive design and interactive features.

Kalyt Technologies Pvt Ltd, Hyderabad, IND (Associate Software Engineer Intern)

SEP 2020 – OCT 2020

- Developed and Maintained websites using modern tech stacks, contributing to core product development.

ACCOMPLISHMENTS

- Built a scalable, reusable UI component library, increasing UI consistency by 60% and team development efficiency by 40%.
- Reduced manual QA effort by 10+ hours/week through automated test coverage (Cypress, Jest).
- Improved application load times by 35% through performance optimization.
- Implemented Micro-Frontend architecture on a large-scale banking/FinTech project, reducing feature dependencies and deployment risk.
- Led front-end migration to TypeScript, reducing production runtime errors and improving code stability by 30%.
- Delivered accessible, high-performance enterprise applications for FinTech clients, supporting compliance and large-scale user adoption.

EDUCATION

- **Guru Nanak Dev Engineering College (VTU University)**, Bidar Karnataka, India
Bachelor of Engineering (B.E) - Computer Science and Engineering with **7.2 CGPA**

MAR 2017 – OCT 2020
